

The background of the image is a high-magnification, grayscale micrograph of a semiconductor chip. It shows a complex network of fine lines, which are likely the circuit traces or interconnects of the chip. There are several larger, darker rectangular regions scattered across the surface, which represent different functional blocks or memory arrays. The overall texture is highly detailed and technical.

2026 18th Symposium on AI-Embedded System-on-Chip

Kyungpook National University, Daehak-ro 80, No. 724, Daegu, Korea, May 28, 2026
